DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Takao et al (5,920,220).

As shown in figures 4-41, Takao teaches many embodiments of the receiver comprising a discriminator unit (4) and timing recovery unit (5).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 2631

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 10, 15, and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takao et al (5,920,220).

Takao teaches all subject matter claimed except for using the direct downconverting a radio frequency signal in the receiver. Instead, Takao teaches using the conventional downconverting. However, the examiner takes the Official Notices that this feature is notoriously well known in the art of digital communications. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to employ or modify the receiver of Takao et al by using the direct downconverting a radio frequency signal since it just an alternative way of downconverting the received RF signal.

Allowable Subject Matter

6. Claims 6-9 are allowed.
7. Claims 2-5, 11-14, 16, and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References Brauns et al (5,689,533) and Bliss (6,032,284) are cited because they are pertinent to timing recovery circuit. However, none of the cited references teaches or suggests, in combination, the arrangements of a receiving unit, an edge detector, a comparator and an edge shifter in order to form a digital circuit as recited in claim 6 and further limitations of the dependent claims 2-5, 7-9, 11-14, 16 and 17.
